

**BitNet becomes**  
**Otto Künnecke Digital Solutions**

# BitNet becomes Otto Künnecke Digital Solutions

## What is the reason for this step?

The digital transformation is all around us and if your company has not been affected by it yet, be prepared to find it knocking at your door in the very near future. If you do not act now, you might fall behind. Business models of all trades – whether it is the manufacturing industry or administration sector – are getting more complex and digital by the day. More and more processes are executed digitally; from the invoice in PDF format to the extensive interconnection inside production sites. Machines, software and IT environments merge ever further and call for intelligent, secure and individual solutions.

Act today or you will miss the future. We take action – and do so by keeping up with modern trends in IT. We have already been working together closely with the Otto Künnecke company for years, carrying out various projects focusing on IT security, digitalization and modern communication services. In order to be able to expand our product and service portfolio and to enjoy the benefits of synergies entirely, we will now pool our competences. As *Otto Künnecke Digital Solutions* we will continue to be your partner in IT with concentrated manpower, versatile know-how and extensive expertise.

## How is Otto Künnecke involved in IT?

The machines that are built by Otto Künnecke have been equipped with self-developed software and IT environments for years. These have to fulfil the highest security requirements imaginable as Künnecke's customers include banks, governments and official institutions. They process high security documents like passports or ID- and credit cards. Hence, data security, intelligent interconnectivity and maximum precision have always been the basic requirements of the solutions created. All IT-installations necessary for the production of

these systems have been carried out by BitNet in the past and are already catering the idea of smart manufacturing. Otto Künnecke's machine systems already depend on reliable data-driven-functionalities that make production errors almost impossible.

## Will we attend to the manufacturing industry only?

No. Although the Otto Künnecke Digital Solutions business unit will attend to digital production processes increasingly, it will also continue to take care of customers of each size and trade. We will continue to listen to them and their project requirements and create custom-made solutions for office, communications and production environments. No matter, whether they are one-man-companies or global players – we will be there for them just like we are now.

## Will BitNet disappear completely now?

No. Even though we will operate under a new name, we will still stay your expert team for IT security and digital solutions – just the way you know us. In the Künnecke Group, we will gain increased importance as digital topics gain further place value by the day. This means, that we will be able to offer an even broader portfolio to our customers and help them make the most of their IT. There will be even more expertise in every solution we may implement for them.

## What is going to happen next?

From January 1st 2018 the BitNet GmbH will be integrated into Otto Künnecke's new business unit Digital Solutions. All existing products and services will still be available to customers on the high quality level they have come to expect from us and the accustomed contact persons will be happy to carry out challenging future projects.

In the name of the entire BitNet and Otto Künnecke team we wish you and us a prosperous commercial future. We are looking forward to a good business relationship and remain with kind regards,

Ralf Diers
